# Current EU Guidelines

Directive 92/28/EEC (art. 88.1) states that pharmaceuticals cannot disseminate information directly to patients.

An exception was made in COM (2001) 404 final for AIDS, Diabetes, Asthma & chronic broncho pulmonary disorders.

[informationtopatients.org](http://informationtopatients.org)

## Problem with the Guidelines

-  Anyone other than pharmaceuticals can provide information on therapies
-  With the growth of the internet and broadband there is a lot of information out there – problem: sources are not always reputable and there is no regulation on the information put there.

# Problem facing the Patient

With constant research and development of treatments, it is impossible for GPs to know everything about every single treatment for every disease area

With the growth of broadband more patients are looking for information online  
→ the result is information overload

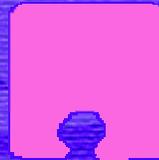

Patient has to discern between “good” and “bad” information but often may lack the skills to do so due to complexity

# Patient Empowerment (Model)

## Diagnosis

This is the first piece of information the patient receives having seen a doctor/specialist and undergone tests. The patient will now have a name for their condition.

# Patient Empowerment (Model)

## Disease

Next the patient obtains facts about the disease such as:

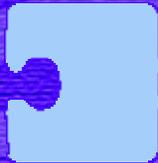

-  What the disease is?
-  What does it mean?
-  What are the effects?
-  Is it contagious?

This information is generally obtained from: doctors, specialists, patient groups, information leaflets, online, etc.

# Patient Empowerment (Model)

## Stages

Further information the patient will obtain is on the progression (stages) of the disease:

- 🧩 What stage of the disease they are at
- 🧩 What it means to them

Again this information is generally obtained from: doctors, specialists, patient groups, information leaflets, online, etc.

[informationtopatients.org](http://informationtopatients.org)

# Patient Empowerment (Model)

Lifestyle

This is information that the patient has.

[informationtopatients.org](http://informationtopatients.org)

## Patient Empowerment (Model)

- # What is needed to directly involve the patient in their treatment?
- # How can the patient make an informed decision?
- # What information is still missing?

[informationtopatients.org](http://informationtopatients.org)

# Patient Empowerment (Model)

- ❑ Available treatment
- ❑ Contra-indications
- ❑ Dosages
- ❑ Side-effects
- ❑ Drug interactions
- ❑ Latest up-to-date research
- ❑ Clinical trials

## Aims of the Site

The aims of the site are two-fold which is reflected in its structure:

To encourage the health information debate

To provide and prove it is possible to provide high quality, unbiased information

[informationtopatients.org](http://informationtopatients.org)

## Why ECPP?

ECPP is a patient organisation with years of expertise

With HIV/AIDS it has been proven that direct communication between manufacturers and consumers works – patients in this field have had to become “experts”

[informationtopatients.org](http://informationtopatients.org)

## Debate Section

The purpose of this section is to encourage participation in the debate by:

Giving background information – chronology, issues, stakeholders etc.

Discussion forum with moderated events from time to time

Patient survey – data to be presented to EU Commission

Newsletter

[informationtopatients.org](http://informationtopatients.org)

# Therapy Section

Provide high quality, unbiased information by:

Giving links to reputable sites regarding information on the disease, prevention etc.

Abiding by HON Code (Health on the Net: [www.hon.ch](http://www.hon.ch))

Putting information in layman's terms, so it can be understood by everyone

Giving up-to-date information on research and putting it into context

[informationtopatients.org](http://informationtopatients.org)

## Access to Information for everyone on the EU

Initially site rolls out in English

Over time it will roll out in main European languages so as to ensure the maximum number of people will be able to access the information
